

Electronic Faxing for Small Business to Enterprise

Secure, Reliable, Simple to Use

Companies are Moving to Electronic Faxing

IT teams no longer need to manage faxing. Our customers are replacing their fax servers and fax telephony with the WizeTech secure cloud fax service, which offers a better user experience with no infrastructure to manage. We make sending a fax as easy as clicking print inside the business applications you use everyday. It's like having a fax machine on every employees desk. Inbound faxes can be delivered via email or directly to your FTP server.

With cloud faxing, all the faxes you send or receive are transferred using our secure network designed for highly regulated industries.

Improve Productivity

No Servers to Manage

Unlimited Fax Capacity

It's Business as Usual

Our faxing solutions allow your business to streamline workflow and increase productivity. WizeTech has you covered with industry compliant solutions for your specific needs. Whether you use fax to receive or send contracts, orders, reimbursements or other mission-critical documents, you need a resource to make sure nothing falls through the cracks.
